Allowable Subject Matter

1. Claims 1-10 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. Regarding claims 1, 5, 9, The prior art of record considered alone or in combination neither anticipates nor renders obvious a method for delay control adjustment in the uplink direction in a cellular telecommunications network comprising a plurality of functionally interconnected nodes for transmission of data wherein said method comprises sending by at least one first node of plural nodes, a timing adjustment command to at least one second node of said plural nodes which requests at least one second node to adjust the sending time of uplink data packets, if at least one uplink data packet sent by at least one second node, wherein said functional interconnected nodes are hierarchical in that at least one node is functional as said at least one first node in view of a preceding one of said nodes preceding a said at least one node in the uplink direction in the network structure, and said at least one node is functional as said at least one second node in view of a following one of said nodes following a said at least one node in the uplink direction in the network structure.

The prior art of record provided numerous teachings of methods for delaying control adjustment. However, the prior art of record failed to specifically disclose at least one of the nodes is capable of both making a timing adjustment request to a preceding node in a data stream and implementing a timing adjustment request received from a following node in the data stream.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
